Research and caveats summary

DEMO-EH-1001 · *Nardostachys jatamansi* · rhizome · status: Processing · **SYNTHETIC DEMO DATA**

Activity: rhizome collection for a community forest user group · Region: Dolpa district, Nepal (synthetic) · Jurisdiction: Nepal · Exact site: Synthetic site J-3 (fictional)

A Harvest Passport is an internal evidence and traceability record. It is not a government permit, a FairWild certificate, a validated local harvest quota, or an assurance of legal compliance or product safety.

Species- and part-specific cautions

Status: ok

Published harvest experiment on rhizome harvest (supported-by-study; applies: same species, same part; review: awaiting expert review)

Long-term growth rate by harvest intensity (0% harvest: λ 1.028; 10% harvest: λ 0.958; 25% harvest: λ 0.891; 50% harvest: λ 0.830; 75% harvest: λ 0.737). λ below 1 means a population that shrinks if conditions persist.

Next: Use it as a scenario in the Studio; local stage counts and recovery measurements are still needed before setting any limit.

Sources: Ghimire SK, Gimenez O, Pradel R, McKey D, Aumeeruddy■Thomas Y (2008) Demographic variation and population viability in a threatened Himalayan medicinal and aromatic herb Nardostachys grandiflora: matrix modelling of harvesting effects in two contrasting habitats. Journal of Applied Ecology 45:41-51. doi:10.1111/j.1365-2664.2007.01375.x (https://doi.org/10.1111/j.1365-2664.2007.01375.x)

How sensitive this population is to the harvested process (survival) (computed-from-matrices; applies: this species; review: shown with caveats; awaiting expert review)

About 97% (95% range 93–99%) of this plant's long-run population growth depends on survival, the process a rhizome harvest affects (6 published matrices, this species).

Next: Use this to judge which local measurements matter most (e.g. survival of large plants), not as a harvest limit.

Sources: COMPADRE v6.26.3.0 matrices (computed here)

Field guidance: leave part of the rhizome and harvest rotationally (practitioner-guidance; applies: same species, same part; review: awaiting expert review)

Field guidance reported as: leave a small part of the rhizome for regeneration, harvest rotationally, and do not harvest without a collection permit.

Next: Record the share of rhizome left and the rotation interval per plot.

Sources: Jatamansi factsheet (https://ansab.org.np/wp-content/uploads/2024/02/jatamansi.pdf)

1 paper on this species reports that harvest reduced population size or growth. (ai-found-literature; applies: this species; review: needs expert review before use)

Found by the evidence agent: JEV classified the paper, Groq extracted the finding, and the quote below was checked word-for-word against the abstract.

Next: A scientific reviewer should read the paper(s) and confirm or reject this finding.

Sources: Demographic variation and population viability in a threatened Himalayan medicinal and aromatic herb Nardostachys grandiflora: matrix modelling of harvesting effects in two contrasting habitats (https://doi.org/10.1111/j.1365-2664.2007.01375.x)

1 paper on this species reports that harvest reduced other outcomes. (ai-found-literature; applies: this species; review: needs expert review before use)

Found by the evidence agent: JEV classified the paper, Groq extracted the finding, and the quote below was checked word-for-word against the abstract.

Next: A scientific reviewer should read the paper(s) and confirm or reject this finding.

CITES Appendix II listing (regulatory-listing; applies: same species; parts covered depend on the annotation; review: awaiting expert review)

International trade needs CITES documents issued by the exporting country's Management Authority. Annotation: ['Originally listed as Nardostachys grandiflora, which became a synonym of Nardostachys jatamansi in 2026, following taxonomic changes adopted at CoP20.']. The listing does not govern collection itself.

SYNTHETIC DEMO — NOT VALID

Not a permit, licence, certificate, certificate of analysis, legal opinion or sustainability claim. Generated by EthnoHarvest from records entered or uploaded by users; document authenticity is not verified with issuers.

Next: Before any cross-border shipment, confirm with the CITES Management Authority which documents apply to your product.

Sources: Species+ (CITES and CMS listings) (https://speciesplus.net/); CITES Appendices I, II and III (https://cites.org/eng/app/appendices.php)

Export of unprocessed rhizome (requires-authority-confirmation; applies: Nepal, Nardostachys jatamansi; review: awaiting expert review)

Reported restriction: export of unprocessed jatamansi rhizome has been prohibited under Nepal's forest legislation, while processed products such as distilled oil are traded under regulation.

Next: Confirm the current rule and any collection permit conditions with the Division Forest Office and the Department of Forests and Soil Conservation before planning sale or export.

12 papers the AI could not classify confidently (needs-review; applies: search results; review: awaiting expert review)

JEV and the keyword rules disagreed, or JEV was unsure. They may or may not contain harvest effects.

Next: A scientific reviewer should screen these and promote relevant findings.

Legal compliance is part of sustainable collection (general; applies: any wild collection; review: awaiting expert review)

Voluntary standards treat legal compliance at local, national and international level as a precondition.

Next: List the authorisations your collection needs and attach them to the passport.

Sources: FairWild Standard: Version 3.0 (approved 19 December 2023) (https://www.fairwild.org/s/FairWildStandard-V3-FINAL.pdf)

Customary rights and benefit sharing (general; applies: any wild collection; review: awaiting expert review)

Collection should respect collectors' and communities' customary rights and share benefits fairly.

Next: Record how consent and benefit sharing were agreed with the community that holds rights to the site.

Sources: FairWild Standard: Version 3.0 (approved 19 December 2023) (https://www.fairwild.org/s/FairWildStandard-V3-FINAL.pdf)

Collection and post-harvest quality practice (general; applies: any wild collection; review: awaiting expert review)

GACP guidance covers identification, collection practice, drying, storage and documentation of herbal starting materials.

Next: Keep identification, drying and storage records per lot; ask the buyer which GACP expectations apply.
