Harvest Passport and audit packet

DEMO-EH-1004 · *Boswellia papyrifera* · resin (stem tapping) · status: Quality review · **SYNTHETIC DEMO DATA**

Activity: frankincense tapping · Region: Tigray / Amhara lowlands, Ethiopia (synthetic) · Jurisdiction: Ethiopia · Exact site: —

A Harvest Passport is an internal evidence and traceability record. It is not a government permit, a FairWild certificate, a validated local harvest quota, or an assurance of legal compliance or product safety.

What public sources say

Item	Value	Provenance
Accepted name	Boswellia papyrifera	prefilled-source
Harvested part	resin (stem tapping)	user-supplied
Growth form	Tree	prefilled-source
Local harvest rate	study-backed scenario only	prefilled-source
CITES	not listed	prefilled-source
Published study	observational · resin (stem tapping) · Groenendijk P, Eshete A, Sterck FJ, Zuidema PA, Bongers F (2012) Limitations to sustainable frankincense production: blocked regeneration, high adult mortality	prefilled-source

Tasks

Task	Owner	Blocking	Status	Resolution
Upload the collection authorisation and confirm it with the issuing authority	manager	yes	resolved	SYNTHETIC DEMO
Verify species identity with a voucher specimen	scientific-reviewer	yes	waived	SYNTHETIC DEMO
Confirm collection rights and community consent (FPIC) for the site	manager	yes	waived	SYNTHETIC DEMO
Quality review: foreign matter for lot DEMO-BOS-D1	quality-reviewer	yes	open	
Agree a local review threshold with a qualified ecologist	scientific-reviewer	no	open	
Measure harvestable yield per plant at the site	collector	no	open	
Count plants by life stage on permanent plots at the site	scientific-reviewer	no	open	
Set up monitoring of harvested and unharvested plants	scientific-reviewer	no	open	
Regeneration check at this collection site	collector	no	open	

Collections

Date	Collector	Reported	Condition
2026-10-02	Collector C (fictional)	18.0 kg	fresh

Lots

Lot	Condition	Status	On hand	Reserved	Available
DEMO-BOS-F1	fresh	active	0.00 kg	0.00 kg	0.00 kg
DEMO-BOS-D1	dry	quarantined	16.20 kg	0.00 kg	16.20 kg
DEMO-BOS-D1-REJ	dry	quarantined	0.40 kg	0.00 kg	0.40 kg

SYNTHETIC DEMO — NOT VALID

Not a permit, licence, certificate, certificate of analysis, legal opinion or sustainability claim. Generated by EthnoHarvest from records entered or uploaded by users; document authenticity is not verified with issuers.

Processing and mass balance

Method	Input	Output	Water	Rejected	Waste	Unexplained
air curing and grading	18.00 kg	16.20 kg	1.30 kg	0.40 kg	0.10 kg	0.00 kg

Fresh and dry mass are never summed. Unexplained mass is a reconciliation gap to explain, not an accusation.

Laboratory results

Lot	Test	Result	Documented limit	Limit source	Outcome
DEMO-BOS-D1	foreign matter	3.4 %	<= 2 %	synthetic buyer specification v1 (fictional)	outside-criterion

Comparisons use the limit documented by the user. EthnoHarvest does not certify quality or safety.

Documents and cross-document checks

File	Read as	Status	SHA-256	Issuer verification

Check	Severity	Finding

Species- and part-specific cautions

Status: ok

Published observational comparison (harvest not randomised) on resin (stem tapping) harvest (supported-by-study; applies: same species, same part; review: awaiting expert review)

Mean long-term growth rate λ 0.962 in harvested populations vs 0.954 in the comparison populations (difference +0.008; 1 vs 1 matrices).

Next: Use it as a scenario in the Studio; local stage counts and recovery measurements are still needed before setting any limit.

Sources: Groenendijk P, Eshete A, Sterck FJ, Zuidema PA, Bongers F (2012) Limitations to sustainable frankincense production: blocked regeneration, high adult mortality and declining populations. Journal of Applied Ecology 49:164-173. doi:10.1111/j.1365-2664.2011.02078.x (https://doi.org/10.1111/j.1365-2664.2011.02078.x)

How sensitive this population is to the harvested process (reproduction) (computed-from-matrices; applies: this species; review: needs expert review before use)

About 1% (95% range 1–1%) of this plant's long-run population growth depends on reproduction, the process a resin harvest affects (2 published matrices, this species).

Next: Use this to judge which local measurements matter most (e.g. survival of large plants), not as a harvest limit.

Sources: COMPADRE v6.26.3.0 matrices (computed here)

1 paper on this species reports that harvest increased growth. (ai-found-literature; applies: this species; review: needs expert review before use)

Found by the evidence agent: JEV classified the paper, Groq extracted the finding, and the quote below was checked word-for-word against the abstract.

Next: A scientific reviewer should read the paper(s) and confirm or reject this finding.

Sources: Limitations to sustainable frankincense production: blocked regeneration, high adult mortality and declining populations (https://doi.org/10.1111/j.1365-2664.2011.02078.x)

Federal forest law applies (regulatory-listing; applies: Ethiopia; review: awaiting expert review)

Collection in forests falls under the Forest Development, Conservation and Utilization Proclamation No. 1065/2018. We did not locate a provision specific to frankincense tapping.

Next: Confirm tapping rights, concession or community forest agreements with the regional forest authority.

Sources: Forest Development, Conservation and Utilization Proclamation No. 1065/2018 (Federal Negarit Gazette, Ethiopia) (https://www.metaappz.com/References/ethiopian_laws/federal/pr_1065_2018/en/pdf)

SYNTHETIC DEMO — NOT VALID

Not a permit, licence, certificate, certificate of analysis, legal opinion or sustainability claim. Generated by EthnoHarvest from records entered or uploaded by users; document authenticity is not verified with issuers.

4 papers the AI could not classify confidently (needs-review; applies: search results; review: awaiting expert review)

JEV and the keyword rules disagreed, or JEV was unsure. They may or may not contain harvest effects.

Next: A scientific reviewer should screen these and promote relevant findings.

Legal compliance is part of sustainable collection (general; applies: any wild collection; review: awaiting expert review)

Voluntary standards treat legal compliance at local, national and international level as a precondition.

Next: List the authorisations your collection needs and attach them to the passport.

Sources: FairWild Standard: Version 3.0 (approved 19 December 2023) (https://www.fairwild.org/s/FairWildStandard-V3-FINAL.pdf)

Customary rights and benefit sharing (general; applies: any wild collection; review: awaiting expert review)

Collection should respect collectors' and communities' customary rights and share benefits fairly.

Next: Record how consent and benefit sharing were agreed with the community that holds rights to the site.

Sources: FairWild Standard: Version 3.0 (approved 19 December 2023) (https://www.fairwild.org/s/FairWildStandard-V3-FINAL.pdf)

Collection and post-harvest quality practice (general; applies: any wild collection; review: awaiting expert review)

GACP guidance covers identification, collection practice, drying, storage and documentation of herbal starting materials.

Next: Keep identification, drying and storage records per lot; ask the buyer which GACP expectations apply.
